

## FERMUAR YAPILARI The Structure Of The Zipper

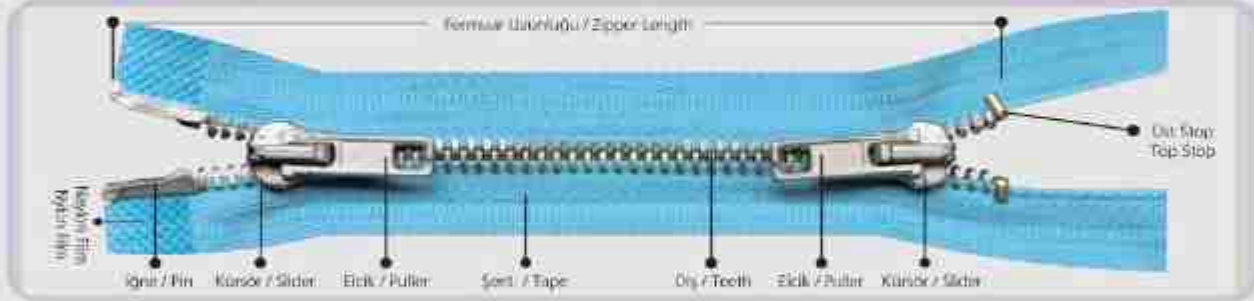

### NAYLON DİPLİ FERMUAR / CLOSED END NYLON ZIPPER

### KEMİK SEPARÉ FERMUAR / OPEN END DELRIN ZIPPER

### METAL KOMBİ FERMUAR / TWO WAY METAL ZIPPER

Fermuarlar şerit, dişler ve kursor olmak üzere üç temel kısımdan oluşurlar.  
Zippers can be divided into three major parts: the tape, the teeth and the slider.

#### Dişler

Fermuar şeritinin iki tarafında bulunan ve kursorün içinden geçtiği zaman birbirine kenetlenen kısımdır. Dişlerin birbirine geçmiş haline zincir denir.

#### Teeth

The teeth, also known as elements, are the parts on each side of a zipper that mesh, or engage with each other when passed through the slider. When the left and the right side teeth are engaged they are called chain.

#### Şerit

Kurdelesi sadece fermuarlar için üretilmiştir. Genellikle polyesterden yapılmıştır. fakat kullanım alanına bağlı olarak sentetik lifler, vinil veya pamuk ipliğinden yapılmış olanları vardır.

#### Tape

The tape is manufactured exclusively for zippers. It is usually made of polyester, but depending on use, synthetic fiber tape, vinyl tape, and cotton tape are also available.

#### Kursor

Kursor fermuar açılıp, kapandığı zaman dişleri birleştiren veya ayıran kısımdır. Kullanılan alanlara göre çeşitlendirilmiş değişik türlerde kursorler bulunuyor.

#### Slider

The Slider joins or separates the elements when the zipper is opened or closed. Various types of sliders are available depending on use.
